

Using Major And Minor Scale Root 6 And Root 5 Scale Shapes In Melodic Studies

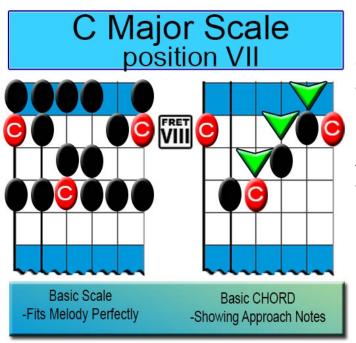

American Patrol

The **American Patrol** march, written by Frank Meacham in 1885 and popularized by the Glenn Miller orchestra in 1941 is often considered a common knowledge melody by jazz and folk musicians alike. The term "patrol" is used here, as was the style, to replace the word "march".

Having been recorded and popularized for well over a century, **American Patrol** has had 9 lives in the music game by having started as a 2-minute Edison cylinder in 1903, the song was a popular piano score, hugely successful player piano roll, ubiquitous band material during both World Wars, as well as having been recorded and arranged innumerable times. The 1941 version by Glenn Miller and his orchestra is clearly the most famous and significant rendition.

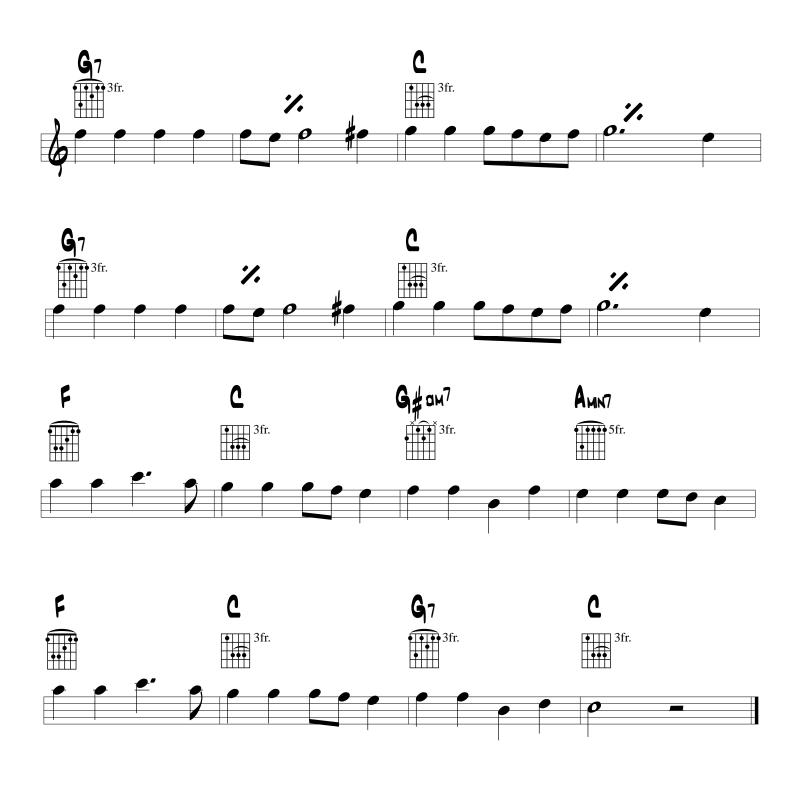

Our study of the **American Patrol** begins with a clearly written and easy to read chord chart. It's there not only as a practice and study material but also to remind you of the importance of knowing, and really knowing, the chord progression for any song on which you are attempting to improvise.

Tiki Tiki Tak

As a foray into world music I have included the Greek song Tiki Tiki Tak which is essentially a folk song having originated in Asia Minor. The first recordings of **Tiki Tiki Tak** were discovered in Greece and Turkey in the early 1900's. The charming and optimistic lyrics express the age old fears and hopes of lovers everywhere.

It is included here because it is a study in the sound of the natural minor scale, minor arpeggio, and beautifully highlights the sound of key scale members and passages in the all important minor scale. Finally, **Tiki Tiki Tak** does a great job at illustrating one of the key points I make throughout this entire course of study: melodies equal bits of chords and bits of scales.

For the sake of completeness the illustration at left shows both versions of a root 6 natural minor scale. The first illustration, with a D note appearing on fret XII of string 4 is our preferred fingering. However if the melody employs a series or string of D to E flat notes, the optional fingering, which has the the D and E flat on the same string is our choice.
